

I fear that anything that jeopardizes Homeland Security is definitely not acceptable.

BPL is without a doubt a threat to our security.

Fire, police, military, and other governmental communications could and probably will be affected by this mode.

Amateur radio operators, also a very large and important part in homeland security, will be affected adversely to the point of being totally useless in HF communications.

Please consider these items before ruling on BPL.

Regards,

Thomas R. Horton
